Stop Mould  
Growth In Your Home

## Stop Mould Growth In Your Home

It's annoying to see patches of ugly mould on walls, and a real hassle to have to continually keep scrubbing to remove re-growth. Now there's a no fuss shortcut to stop unsightly, and often smelly, mould growth.

**New ICI Dulux Pentalite Mouldguard** is a revolutionary formula created to prevent mould growth on ceilings and damp areas. It can effectively and safely stop mould growth to give you longer lasting cleaner walls.

## Everything You Need To Know About Mould

### Normal Emulsion Paint

Patches of mould

### Mouldguard

No appearance  
of mould

Mould is a fungus which grows from airborne spores present in the air. These spores grow when they come into contact with moisture. Mould is common in areas where ventilation is poor, and areas with damp surfaces like ceilings, bathrooms, kitchens and around air-conditioners. Left unchecked mould can spread.

Although unsightly, and often smelly, mould is usually harmless. However, some people, especially asthmatics, can develop chronic allergies to mould spores and fungal infections.

## Benefits Of ICI Dulux Pentalite Mouldguard

While Mouldguard offers the highly desirable benefit of preventing mould growth – especially on ceilings and other areas prone to damp – it has other properties that makes it the perfect paint for your home.

- Revolutionary anti-mould formulation especially for ceilings
- Offers a broad-spectrum protection against most species of mould
- Refreshing Mountain Pine fragrance
- Non-toxic and completely safe
